

PARAGON SLIDING STACKING SYSTEM

The leading Frameless Sliding Stacking Door System for the high-end market.

Certification

The Paragon Frameless Sliding Stacking system is the only system to have passed both A1 & A2 certifications for water and wind penetration.

Now Available with Ezee Lock

First in the World 

**Revolutionary
new design with
Push & Pull action!**

Easy Operation:
SINGLE HANDED

GLASS

Toughened safety glass is ideal for bolted structural glazing and frameless applications. Toughened glass meets the safety glass requirements of South African National Building Regulations and can be obtained from accredited suppliers only.

ALUMINIUM

Best grade available - 6005 grade aluminium. This excludes cladding material such as flats & angles.

STEEL COMPONENTS

316 grade stainless steel.

POWDER COATING

All standard powder coating on the aluminium profiles is guaranteed for 15 years.

SAFETY & SECURITY

Internal sliding locks on top & bottom profiles of opening panel. Stainless steel key-locks also avail. 8-10mm toughened glass. 5x Stronger than normal safety glass. Strong, sturdy profiles. 6005 Grade Aluminium. 316 Grade stainless steel bolts. Structural glue & s/steel mechanical fixing used to secure glass.

AESTHETICS

Smooth crisp lines. Small Aluminum profiles. Clear weather strips. Wide range of colours available. Simply put; it grants its owner an unobstructed view.

VERSATILITY

Totally retractable. 95% Opening usage. Many shapes (straight, curved, corners). Open inwards or outwards. Open left, right or both ways. Arty internal room dividers. Accommodates any curtains or blinds.

WEATHER PROOFING

Weather resistant wool-pile strips on in- & outside of top profile. Minimum clearance between profiles. Weather resistant wool-pile strip on the outside of the bottom track. Built-in drain channel inside bottom track. Triple wool-pile strips on closing side. Double wool-pile strips on opening side. Unique rotating cam-lock action stabilizing against wind loads. Unique weather strips between panels. Clear + UV resistant (Will not go yellow or become brittle). Soft silicone inserts to prevent water and wind penetration. 5 Year guarantee on strips. Interlocking plastic caps between panels. Weather resistant shoulder on the outside. Drain pipes installed every 2000mm to circumvent excess water.

PARAGON remains THE BEST Frameless stacking door system on the market. Now made even better with the introduction of our first-in-the-world handle option: The EZEE LOCK.

The Ezee Lock's unique *push & pull* action is operated at a comfortable waist height level. Fully interlocking, as the opening end-caps are replaced with a male & female end-cap. Upon closure, it creates a *tight compression*, greatly increasing security throughout the system. The first opening panel's single-lip weather-strip is replaced by a double-lip weather-strip, hugely improving the whole system's reaction to weather conditions. Ezee Lock gives the end user an easy one-hand operation with the twist of a handle on a system of up to 3m high. Paragon system combined with the Ezee Lock is substantially more secure, sturdier and weather proofed in *comparison* to its predecessors.

Upgrade current Paragon systems with the Ezee Lock option and enjoy complete satisfaction of extra weather protection plus *added security*.
